Service completed by: Anthony Miller

ESTIMATE

Services	amount
Brushed Job-1856 sqft	\$19,985.00
1. If necessary, lay plywood down for equipment mobilization so damage to your yard is kept at a minimum. Depending on the equipment being used this is not always the case.	
2. Demo earth and any other materials and haul away debris. Re-establish sub grade. Includes checking existing sub grade. Add additional compacted #53 stone as needed. If necessary, use a laser to grade. This covers removal of concrete/asphalt up to 5" in depth. Anything greater than this is subject to an additional fee.	
3. Form, pour and finish new concrete at a depth of 4" at 4500PSI(INDOT Class A).	
4. Fiber mesh reinforced.	
5. Expansion foam installed against permanent structures.	
6. Brush finish.	
7. If needed, any public utilities will be marked for the customer.	
8. If needed, any permit required for the job will be obtained for the customer. Building permits and projects in Zionsville excluded.	
9. We typically ask for \$500 at the time of signing the contract unless discussed otherwise.	
10. We can backfill the perimeter of your new project with topsoil for a fee. Otherwise, backfilling will be left to the homeowner as there rarely is usable earth leftover. This is the industry standard. This service is not meant to replace dirt for an extreme grade but rather protect the sub-grade from washing out. If re-grading of the backfill is necessary please contact a landscaper as this is not part of the service and is rarely needed. Find pricing below.	
11. Check out our other reputable company that we have transitioned to strictly commercial work, Gastoll Concrete, for additional 5 star reviews on Google and Angi. For example jobs visit our Silvers Concrete and Paving Facebook page or our website at silversconcreteandpaving.com.	
12. Payments can be made via check, cash, financing, ACH(1% fee), CC(3% fee) or Apple/Google Pay(3% fee).	
13. If applicable, customer is aware that a portion of fencing may need to be taken down for equipment access. Any sections taken down will be reinstalled.	
14. If applicable, customer is aware that if the project contains any attached brick that the demolition will likely cause some of the brick to be damaged. We are not responsible for any replacement or repair of any damaged brick.	
15. If applicable, customer is aware that irrigation lines in the near proximity of the project will most likely be damaged. We are not responsible for any replacement or repair of these damages as they are unavoidable. We recommend to have them moved prior to installation or to expect to have repairs after our work commences.	
16. Curing and sealing included with E5 Protect.	

17. 3 year warranty included. The warranty shall be limited solely to defects in workmanship. The warranty also covers cracking of 3/8" or greater in width.

18. A service team member will visit EVERY job shortly after completion to ensure that your property is clean and free of any debris. At this point add on services like topsoil or caulking will be completed. They will also place a sign in the customer's yard unless specifically asked not to by the homeowner. The homeowner does not need to be present at this point.

19. Please review the attached drawings to confirm they align with your specifications and installation requirements.

AREAS TO COMPARE COMPANIES-

1. Are they protecting your lawn and property when possible?
2. Are they using pea gravel/sand as a sub-grade? This is a big red flag.
3. Are they insured and bonded?
4. Are they sealing your project?
5. Be wary of companies that require a large deposit as this should never be needed in this industry.
6. What is the duration of their warranty?

We pour EVERYTHING with the use of concrete's 5th element – E5!!

The use of E5 products in concrete is quickly spreading through the industry as a necessary addition to any concrete job. E5 products allow for a much stronger and denser concrete surface as well as being a crucial aid for the concrete finishers to provide a much more aesthetically pleasing finished product. Perhaps the greatest benefit of E5 is that it is a carbon reducing, environmentally friendly product.

E5 INTERNAL CURE

- An admixture poured integrally with the concrete that eliminates the need for any post-placement chemicals or water curing. E5 prevents water evaporation and allows concrete to CURE rather than DRY. Concrete is naturally porous. E5 Internal Cure provides a much denser and stronger finished product.

E5 PROTECT

- Topically placed application to freshly poured or existing surfaces that deeply penetrates and chemically reacts with concrete to evacuate existing contaminants and retards future penetration of chlorides, greases, oils and acids. E5 Protect is an environmentally friendly sealant that is exceptionally resistant to the damaging effects of water and salt.

E5 LIQUID FLY ASH

- Traditional fly ash is a by-product of coal. It is often used in concrete mixes with or in the place of cement to slow down the chemical reaction, prevent rapid evaporation, and allow more time for the finishers. E5 Liquid Fly Ash is an environmentally safe and carbon reducing alternative to traditional fly ash that aids in providing a much denser and stronger concrete surface.

ADDITIONAL OPTIONS-

Integral color- \$2.50 a sqft.

Expansion Joint Caulking- Only installed where expansion foam is located.

\$250 minimum- 50 linear feet and under.

\$4 for every extra linear foot above 50 linear feet.

Topsoil Backfill- Measured by adding the total of the perimeter of the project.

\$400 minimum- 60 linear feet and under.

\$4.50 for every extra linear foot above 60 linear feet.

FINANCING OPTIONS-

Check out what payment plans work best for you! It takes two minutes or less to apply and applying will NOT affect your credit score. Credit scores will be checked if you move forward with a loan.
