THE TOWN OF
McCORDSVILLE

Next Stop McCordsville

STATEMENT OF INTENT

The Town of McCordsville is experiencing growth. That growth necessitates the need for a wastewater plant expansion. Our current facility is designed for 0.5 MGD (Million Gallons Per Day). The proposed facility will increase capacity to 1 MGD. The main components of the expansion include:

- Adding four additional large concrete tanks to the existing process tank layout
- Expansion of the existing lab and maintenance building
- Construction of proposed post air/UV and sludge dewatering building
- Construction of cover for existing fine screen
- Removal of the existing sludge loading station
- Added parking and drive to access post air/UV and sludge dewatering building

This plant expansion is contained completely on the parcel the plant currently sits on. Any future expansions will include the Town's adjacent parcel to the west.
